

Identity at the  
Speed of Life

## FST Biometrics Profile

In a world of urbanization, globalization and technology ubiquity, identification is not a simple matter. Issues such as fraud, privacy concerns and, of course, the speed of life today, combine to demand identification solutions that are highly sophisticated and secure, while remaining non-invasive and easy to use. Of course, they must identify individuals correctly 100% of the time.

FST Biometrics believes that accurate identification should not interfere with the pace of life. That philosophy has led the company to develop visual identification technologies that serve as the basis for FST's In Motion Identification™ (IMID) solutions.

FST is the leading global visual identification company, currently providing millions of accurate identifications each month for a range of applications for customers in the corporate, retail, financial, sports and entertainment, real estate, transportation, education and healthcare vertical markets.

FST Biometrics has won numerous awards, including, most recently, a Best New Product award by the Security Industry Association at ISC West 2017.

FST Biometrics' IMID-based solutions utilize a deep fusion of visual identification technologies, including facial recognition and behavior analytics, to swiftly identify users at a distance and in-motion. IMID provides seamless identification at the speed of life.

IMID identifies users from a distance and in-motion. Individuals simply walk naturally towards access points with no need to slow down or stop.

FST's software, IMID Access, is an open platform that can be seamlessly

## FST Biometrics Profile

integrated into other systems and software for smooth implementation in a variety of applications and use cases. IMID Access provides identification and access control solutions, advanced visitor administration, fraud detection, remote monitoring and more.

FST's IMID solutions increase the level of operational efficiency for organizations, offering faster entry/exit, better control over secure locations such as construction sites, labs, R&D and management areas, as well as improved identification of sub-contractors and other visitors. In addition, the solution can be used to create tailored retail user experiences to help improve customer service and loyalty.

The company's strong executive team is led by founder and President Major General Aharon Ze'evi Farkash, the former head of the IDF (Israeli Defense Forces) Military Intelligence Directorate; Chairman of the Board Avi Naor, one of Israel's high-tech veterans and founder of software giant Amdocs; and CEO Gary Drutin, former Chief Customer Officer of Allot Communications.
