

Identity at the
Speed of Life

IMID Rapid

Short-Term, Ultra-Fast Deployment In-Motion Visual Identification System

In most cases, the level of security and need to control access to a specific area is permanent and ongoing for the location. For instance, there is a permanent need to control the access to corporate facilities or government buildings. However, in some cases the need for high level security or the need to control access to a specific location is temporary.

There is, for example, the need to set up a temporary secured perimeter around a VIP, or to protect a crime scene from unauthorized personnel. In these cases, fast and accurate identification is a critical need.

For such scenarios, IMID Rapid – Secure Access in a Suitcase – is the answer. IMID Rapid is a rugged and portable in-motion identification system. It serves as a means for security personnel to implement FST's proven visual identification system for short-term deployment, providing seamless, non-invasive and accurate identification wherever it is needed.

Applications

IMID Rapid is the choice for first responders who must travel to a remote site and set up secure access entry points ultra-fast to ensure a protected perimeter. Police departments, military units and other security forces can count on FST's In Motion Identification™ technology for temporary seamless identification, at the speed of life.

Police Departments

IMID Rapid enables the police to set up a sterile and isolated crime scene by allowing only authorized personnel to be on-site. Once the police work in a specific scene is completed, IMID Rapid can be dismantled and transported to a new location quickly.

Special Security Forces

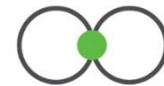

When a high-ranking government official or highly protected VIP needs to attend a meeting in a public space (press conference, ceremonies, etc.), attendees are required to stand in long lines for security checks and inspections. Many of these attendees are authorized and well known (journalists, government officials, etc.), but nevertheless, they will need to go through a prolonged security process. With IMID Rapid in place, security forces can grant to these authorized personnel seamless secure access at the speed of life, and save a lot of time.

Key Features

IMID Rapid is a full IMID Access system in a suitcase – ready for fast deployment. Simply open the suitcase, construct the camera-tower and plug in the power cord.

IMID Rapid automatically logs all information and provides comprehensive reporting and analytical tools. This enables the creation of reports, records, restricted person entry attempts, and usage time and traffic.

Weight	44 Pound
Dimension	31.3"x20.4"x12.2"
Recognition time, less than	2s
Speed supported	Walking speed
FAR/FRR	3E-3/2E-2
Users supported	1000
