

FST Biometrics and Genetec Inc. Announce Strategic Partnership and Product Integration

Genetec to Incorporate Biometric Identification into 'Security Center' for Expanded Access Control Capabilities

RISHON LEZION, Israel March 8, 2017 – [FST Biometrics](#), the leading biometric identification solutions provider, and [Genetec Inc. "Genetec"](#), a leading manufacturer of open-platform, unified IP security software and solutions, today announced a new collaborative relationship. The two companies will work together to integrate the FST biometric fusion of identification technology, which combine face recognition and body behavior analytics, with the [Genetec™ Synergis](#) access control system in Security Center.

FST's cutting-edge In Motion Identification (IMID) technology will be deployed as a part of Genetec™ [Security Center](#), a unified IP security platform, and will manage physical secure access to facilities through a simple and easy integration that allows Security Center customers to maintain their existing security setup. Security Center users will now have the option to implement an identity management component that will admit users based on their biometric profile as they approach access points. IMID can also be combined with RFID cards for organizations that require multi-factor identification.

"FST Biometrics is excited to be working with one of the market leaders in facility security to not only improve the quality and accuracy of identity and access management, but also to make the user experience smoother," said Arie Melamed, CMO of FST Biometrics. "The integration of IMID into the Security Center ecosystem means that users will be identified by who they are, not what they carry – all without breaking their stride or slowing down."

With this integration, Security Center users will be able to receive real-time alerts from IMID such as when unauthorized or blacklisted visitors attempt to enter the facility. In addition to advancing the access control capabilities of the system, IMID's database is easily and fully synchronized with the existing Security Center database, eliminating the need to re-enter authorized users' information.

"Genetec is pleased to collaborate with FST Biometrics to offer our end-users an expanded choice of secure access management options to incorporate facial recognition and body behavior analytics" said Derek Arcuri, Product Marketing Manager, Genetec Inc. "Adding the capability of In Motion Identification to the Synergis access control solution in Security Center, credential holders will be able to access restricted areas more conveniently," added Arcuri.

###

About Genetec Inc.

Genetec™ develops open-platform software, hardware and cloud-based services for the

physical security and public safety industry. Its flagship product, Security Center, unifies IP-based video surveillance, access control and automated license plate recognition (ALPR) into one platform. A global innovator since 1997, Genetec™ is headquartered in Montréal, Canada, and serves enterprise and government organizations via an integrated network of resellers, integrators and consultants in over 80 countries. Genetec™ was founded on the principle of innovation and remains at the forefront of emerging technologies that unify physical security systems. For more information about Genetec™, visit: www.genetec.com.

About FST Biometrics

FST Biometrics is a leading identity management solutions provider. The company's IMID™ product line offers access control through its proprietary In Motion Identification™ technology. This provides the ultimate security and convenience for users, who are accurately identified without having to stop or slow down. IMID™ solutions integrate a fusion of biometric and analytic technologies that include face recognition, body behavior analytics and voice verification. For more information, please visit www.fstbm.com.
